AGP

Africa & Global Power

Platform Navigation & User Guide

For Readers, Researchers and authorised AGP personnel

AGP is an independent African research, policy-intelligence and researcher-network platform. This guide explains how to create an account, discover research, manage a researcher profile, use messaging and opportunities, submit work for editorial review, and understand the platform's trust controls.

Editorial operations are intentionally private. Public users cannot access the internal editorial workspace, which helps reduce bias, inappropriate influence, fraudulent interference and conflicts during manuscript review.

Live platform: africaglobalpower.netlify.app

1. Getting Started

AGP separates Reader and Researcher accounts because they serve different purposes.

Reader Account	Researcher Account
For people who mainly want to read, save research, follow researchers and make professional inquiries.	For people who want a public research identity, publication workflow, analytics and collaboration visibility.

- Choose Join AGP and select Reader or Researcher.
- Complete the account-specific registration form.
- AGP sends an 8-digit verification code to your email.
- Enter the code on the verification screen. Verification codes expire and have attempt/resend controls.
- After verification, sign in with your email and password; AGP may request a login verification code.

2. Reader Guide

- Reader Workspace: see saved research, followed researchers, unread messages and notifications.
- Research: browse published AGP work and open a publication to read it.
- Save Research: use Save on a publication, then open Saved Research from your workspace.
- Follow Researchers: open a public researcher profile and choose Follow Researcher.
- Messages: contact researchers who have opted in to professional inquiries. Message types include Opportunity, Collaboration and General Inquiry.
- Opportunities: browse fellowships, grants, collaborations, calls for papers, internships, scholarships, conferences and research opportunities.
- Account Settings: update your basic Reader information. Reader accounts are not listed publicly as researcher profiles.

3. Researcher Guide

- Researcher Portal: manage publications, messages, amplification, analytics and your public profile.
- Edit Public Profile: add your professional headline, biography, expertise, research interests, tools, technical stack, languages and professional links.
- Featured Works: choose published AGP works to highlight on your profile.
- Collaboration preference: decide whether registered users may contact you through AGP Messages.
- New Publication: create a submission using the publication workspace and Trust Vault workflow.
- Analytics: track readership activity associated with published work.
- Research Amplification: use AGP's distribution tools after publication.

4. Public Researcher Profiles

Public researcher profiles make expertise discoverable without exposing private email addresses.

- Professional headline and institution
- About / biography
- Expertise and research interests
- Research tools and technical stack
- Languages
- ORCID, website, GitHub, LinkedIn, Google Scholar and ResearchGate

- Featured and published AGP work
- Follow and controlled messaging actions

5. Opportunities Radar

The Opportunities Radar is curated rather than open-posting. Public users browse; authorised AGP personnel publish verified entries.

All	Fellowship	Grant
Collaboration	Call for Papers	Internship
Scholarship	Conference	Research

Each opportunity can include an organisation, category, country/location, deadline, summary, application link and tags.

6. Research Rooms

- Researchers can create public or private Research Rooms.
- Public/open rooms can be joined by eligible users; invitation-based rooms require an invite.
- Room members can post discussion updates and research-resource links.
- Private rooms protect discussions from non-members.

7. Submission, Trust Vault & Editorial Review

Stage	Purpose
Draft	Researcher prepares submission
Submitted	Submission enters AGP review
Desk Review	Initial editorial assessment
Editorial Review	Assigned review and analysis
Revision Requested	Author responds where required
Source Check	Sources and evidence are checked
Approved / Scheduled	Final publication preparation
Published	Work becomes public and can be amplified

Trust Vault records manuscript fingerprints, snapshots, assignment and access events. Editorial access is restricted and manuscript handling is separated from ordinary public browsing.

8. Why Editorial Access Is Private

Editorial is not a public account type. AGP deliberately provisions editorial access privately rather than allowing public registration.

- Reduces the risk of applicants creating fake editorial identities.
- Protects confidential manuscripts and unpublished research.
- Supports conflict-of-interest declarations and recusal.
- Reduces external pressure, prejudice and inappropriate influence during review.
- Preserves a traceable, accountable publication process.

9. Super Admin & Content Governance

Super Admin is the highest application-level authority, but AGP still uses controlled workflows and audit boundaries rather than unrestricted bypasses.

- Manage user roles and account status.
- Oversee public intelligence content such as Opportunities, Policy Tracker and Data Lab records.
- Edit, publish/unpublish and remove records where authorised.
- Mark opportunities closed when they are no longer accepting applications.
- Access editorial and platform-administration areas where permitted.

10. Privacy, Safety & Good Use

- Never share OTP codes, passwords, recovery codes or MFA secrets.
- Use AGP messaging rather than exposing personal email addresses publicly.
- Verify external opportunity links before applying.
- Researchers should keep public profile information professional and accurate.
- Report suspicious content or account behaviour to AGP through the Contact page.

11. Quick Navigation

Area	What you will find
Public	Research, Researchers, Africa, Opportunities, Data Lab, Policy Tracker, About, Trust & Legal
Reader	Dashboard, Saved Research, Following, Messages, Notifications, Account Settings
Researcher	Dashboard, Edit Public Profile, Publications, Analytics, Amplification, Messages, Research Rooms
Editorial	Private editorial login, submission review, Content Studio, Amplification Desk
Super Admin	System Administration plus authorised editorial/content controls
